Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimmune lesions, and renal failure in biopsy specimens, plasma samples, and body fluids. PCR primers AAX35642-43 were used to amplify hp3 cDNA, in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes a polypeptide having heparanase activity. The recombinant protein is used as a modulator of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimmune lesions, and renal failure in biopsy specimens, plasma samples, and body fluid PCR primers AAX35646-47 were used to amplify hp3 cDNA, in the course the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, atherselerosis, inflammation, neurodegenerative diseases, and viral

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           which encoded a protein with heparanase catalytic activity. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bloavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bPGF) and cytokines (e.g. interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; heparanase; gene therapy; tumour; inflammation; autoimmunity; heparin-binding growth factor; cytokine; neurodegenerative plaque; wound healing; infection; burn; angiogenesis; restenosis; atherosclerosis; inflammation; neurodegenerative disease; Gerstmann-Straussler Syndrome; Creutzfeldt-Jakob disease; PCR primer;
                                                                                                                                                                                                                                                                                                                                           New polynucleotides encoding a polypeptide having heparanase activity, useful in wound healing and in gene therapy, particularly in treating tumour, inflammation, autoimmunity, neurodegenerative diseases
The present PCR primer was used to amplify a human cDNA sequence, which encoded a protein with heparanase catalytic activity. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bFGF) and cytokines (e.g. interleukin (IL)-8),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
which encoded a protein with heparanase catalytic activity. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bFGF) and cytokines (e.g. interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns) and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral, bacterial or protozoa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; heparanase; gene therapy; tumour; heparin-binding growth factor; cyckine; wound healing; infection; burn; angiogene atherosclerosis; inflammation; neurodegen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAA75067
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        certain viral and some bacterial and protozoa infections,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SSKG
                      The present invention describes heparanase-specific molecular probes, CC useful for methods of detecting heparanase in situ. The probes and anti-heparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially metastasis), for treatment of heparanase-associated diseases (e.g. tumours, (ademo)carcinoma, squamous cell carcinoma, treatocarcinoma, metastases) derived from liver, prostate, bladder, breast, ovary, celon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammation, haemorrhagic nephritis, nephrotic syndrome, sepsis and inflammatory or autoimmune disease), for targeted CC drug delivery (e.g. of anticancer agents) and as research reagents. The present sequence represents a PCR primer for human heparanase, which very
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity Matches 24; Conserv
                                   polypeptides can be used to prevent tumour angiogenesis, metastasis and invasion, and to intervene with pathologies associated with impaired heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoa and bacterial infections or disintegration of neurodegenerative plaques. The present sequence represents a chicken signal peptide/human heparanase chimeric cDNA
                                                                                                                                    The invention relates to an isolated avian and reptile nucleic acid, encoding a polypeptide with heparanase catalytic activity. The signal peptide of the nucleic acid can be used to express membrane-associated or secreted proteins in heterologous expression systems. The encoded

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                 This sequence encodes the human pre-proheparanase of the invention. This sequence was isolated from human platelets. The heparanase can be used for identifying agents which alter heparanase activity. The heparanase can be used for wound healing or for blocking angiogenesis or inflammation. It can be used for treating e.g. psoriasis, diabetic retinopathy or solid tumours, or for the degradation of heparin and the neutralisation of heparin's anticoagulant properties during surgery. Inhibitors of heparanase activity can be used in the treatment of arthritis, asthma, and other inflammatory diseases, vascular restenosis, atheroscies and other inflammatory diseases, vascular restenosis,
atheroscierosis, tumour growth and progression, fibroproliferative disorders, and central nervous system (CNS) and neurodegenerative diseases. The products can also be used for detection and diagnosis. The purified heparanase, both recombinantly produced human heparanase and heparanase isolated from human platelet activity, allows for the convenient selection of compounds having anti-heparanase activity, i.e. inhibitors of heparanase activity, by measuring inhibition of heparanase activity, inhibitors of heparanase activity, by measuring inhibition of heparanase activity can be measured by blocking heparanase-mediated release of radioactive fragments from in vivo radiolabelled (HSPG)/heparin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo

                                          of high stringency and has a sequence comprising 10-40 bp. The internucleoside linkages of the oligonucleotide comprise at least one phosphorothioate linkages. Hybridisation of the oligonucleotide to the ribonucleic acid inhibits expression of the heparanase, where inhibition of heparanase means at least a 50% reduction in the quality of heparanase in a cell; (2) a composition comprising the above oligonucleotide in an amount effective to inhibit the expression of a heparanase in the cell and a carrier; and (3) a method of treating a tumour in a subject comprises administering to the subject an amount of the above oligonucleotide effective to inhibit expression of a heparanase in the cell and a carrier; and (3) a method of treating to the subject an amount of the above oligonucleotide effective to inhibit expression of a heparanase in the subject. Heparanase antisense oligonucleotides have cytostatic activity, can be used in gene therapy, and can be used for preparing a composition for treating tumours. The present sequence encodes human a composition for treating tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1593 BP; 426 A; 370
                                                                                                                                                                                                                                                                 The present invention describes an oligonucleotide having a sequence complementary to a sequence of ribonucleic acid encoding a heparanase. The oligonucleotide hybridises with the ribonucleic acid under conditions

                                                                                                                                                                                                                                                                                enzymes having endoglucuronidase activity. Recombinant heparanases are capable of removing the HS side chain from heparan sulfate proteoglycan (HSPG). Sulfated oligosaccharides, sulphonates or HSPG can be used to inhibit heparanase, this is useful for treatment of a physiological or medical condition associated with elevated heparanase activity, such as metastasis, angiogenesis, wound healing, angioplasty-induced restenosis, arteriosclerosis, atherosclerosis and inflammation. The human, murine and rat heparanases can be used to enhance wound healing, especially associated with tissue development and repair. The conditions mentioned above can be diagnosed using specific antibodies, and also using primers and probes specific for the heparanase polynucleotides. Other uses of the heparanases include sequencing sulfated molecules such as HSPG. The present sequence represents a DNA encoding human heparanase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Heparanase; endoglucuronidase; heparan sulfate proteoglycan; enzyme; metastasis; angiogenesis; wound healing; angioplasty-induced restenosis; arteriosclerosis; atherosclerosis; inflammation; tissue development;

                                                                                                                                                                                                                                                                                                                                                                            activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimmuna he defining.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Heparanase; hpa; modulator; heparin-binding growth factor; cellular response; cytokine; cell interaction; plasma lipoprotein; cellular susceptibility; infection; disintegration; neurodegenerative plaque; wound healing; angiogeneesis; restenosis; athereclerosis; inflammation; neurodegenerative disease; neutralise plasma heparin; micrometastasis; autoimmune lesion; renal failure;

                                                                                                                                                            The present sequence encodes a human protein with heparanase catalytic activity. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bfg) and cytokines (e.g. interleukin (II)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burne), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-straussler Syndrome or Creutzfeldt-Jakob disease), and some viral,
                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotides encoding a polypeptide having heparanase activity, useful in wound healing and in gene therapy, particularly in treating tumour, inflammation, autoimmunity, neurodegenerative diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; heparanase; gene therapy; tumour; inflammation; autoimmunity; heparin-binding growth factor; cytokine; neurodegenerative plaque; wound healing; infection; burn; angiogenesis; restenosis; atherosclerosis; inflammation; neurodegenerative disease; derstmann-Straussler Syndrome; Creutzfeldt-Jakob disease; ds.

                                                                                          may also be implicated in tumour angiogenesis and metastases. (II) is potentially useful in wound healing and for treating angiogenesis, restenosis, atherosclerosis, inflammation, neurodegeneration, viral infection and cystic fibrosis. It can also be used to neutralise heparin (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodies raised against (II) are used for immunodetection and diagnosis of micrometastases, autoimmune lesions and kidney failure. (A) provide in large quantities, in a form that is homogeneously processed and activated neutralised by a dedicated protease. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes genetically modified cells (A) containing a polynucleotide (I) that encodes a polypeptide with heparanase activity, and express recombinant heparanase (II). Heparanase cleaves heparan sulphate (HS) at specific intrachain sites, resulting in release of heparin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It

                                                                                                                                                                                                                                                               The present invention describes heparanase-specific molecular probes, useful for methods of detecting heparanase in situ. The probes and anti-heparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially metastasis), for treatment of heparanase-associated diseases (e.g. tumours, (ademo)carcinoma, squamous cell carcinoma, teratocarcinoma, mesothelioma, melanoma, lymphoma or leukemia, a solid cancer (or its metastases) derived from liver, prostate, bladder, breast, ovary, cervix, colon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammatory or autoimmune disease), for targeted drug delivery (e.g. of anticancer agents) and as research reagents. The present sequence encodes human heparanase, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      metastasis; adenocarcinoma; squamous cell carcinoma; teratocarcinoma; mesocthelioma; melanoma; lymphoma; leukepia; cancer; sepsis; diabetes; inflammation; haemorrhagic nephritis; nephrotic syndrome; autoimmune disease; anticancer; kidney disease; ds.

The invention relates to heparanase DNA and protein sequences. The heparanase DNA and protein sequences are useful in wound healing, angiogenesis, restenosis, atherosclerosis, inflammation, pulmonary diseases, neurodegenerative diseases (such as Scrape, Alzheimer's diseases, and Creutzfeldt-Jakob disease) or viral infections. The heparanase coding sequence is particularly useful in ginfections.
                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotides and polypeptides that are distantly homologous heparanase, useful in wound healing, as well as in gene therapy protocols for angiogenesis, restenosis, atherosclerosis, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nelydidiane; http://www.inclining.com/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /clone_ind=_cool arce by form that it is the cool in the findIII; Site 2:
/note="Wector: pBeloBacil; Site 1: HindIII; Site 2: HindIII; Rice is one of two most popular grains in the world. Half of the world population especially those inhabiting highly populated areas of the hundi tropics and subtropics, rely on rice as their primary source of carbohydrate. Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety. The library contains 36,864 clones with an average insert size of 128.5 Kb providing 10.9 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Two high density filters, with whole library for colony screening."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sulphate (HS) at specific intrachain sites, resulting in release of heparin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It may also be implicated in tumour angiogenesis and metastases. (II) is potentially useful in wound healing and for treating angiogenesis, restenosis, atherosclerosis, inflammation, neurodegeneration, viral infection and cystic fibrosis. It can also be used to neutralise heparin (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodies raised against (II) are used for immunodetection and diagnosis of inflared quantities, in a form that is homogeneously processed and activated/neutralised by a dedicated protease. The present sequence represents a PCR primer for human heparanase, which is used in an
                                                                                                                                                                                                                                               metastasis; adenocarcinoma; squamous cell carcinoma; teratocarcinoma; mesothelioma; melanoma; lymphoma; leukemia; cancer; sepsis; diabetes; inflammation; haemorrhagic nephritis; nephrotic syndrome;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            vector. The vector was used in examples from the invention to demonstrate baculovirus-mediated gene transfer to the rabbit arterial wall, rat brain and rabbit skeletal muscle. The invention relates to the delivery of a gene product by providing the gene in a baculovirus vector and applying the vector to a body compartment which is free (or usually free) of blood. In a device for the periadventitial delivery of a gene product, the gene is provided in a baculovirus vector from which the gene is expressed. The baculovirus vector is useful for gene therapy, especially of vascular diseases such as post-angioplasty restenosis, post-bypass atherosclerosis, stenosis of vascular prosthesis anastomoses and thrombus formation. It is also useful for administration into brain (e.g. for cancer treatment) or ex vivo injection into saline-perfused organs or vessels for transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pPASTBac1 (pFB). A cytomegalovirus nuclear-targeted lacZ expression cassette (see ABL57028) was inserted into the vector at an Stul site (nucleotides 121-126 of the present sequence), in opposite orientation to the vector's polyhedrin promoter, to construct a nuclear-targeted beta-galactosidase encoding baculovirus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Delivery of gene product, comprises applying the gene in baculovirus vector to blood-free body compartment, useful e.g. for gene therapy of vascular diseases using periadventitial collar -
                                                                                                                        29-MAY-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             capable of mediating periadventitial gene transfer. The vector is useful for treating a condition that requires enzyme replacement such as subarachnoid haemorrhage. It is useful as an efficient tool for gene delivery to cerebral choroid plexus cells and in gene therapy of several types of brain disorders. It is also useful for treating cancer e.g. in brain. To analyse the gene transfer efficiency of baculovirus and adenovirus vectors (both comprising the LacZ cassette), the viruses were injected into corpus callosum of adult rats. Expression of LacZ was analysed by reverse transcriptase (RT)-polymerase chain reaction (PCR). The present sequence represents a CMV-nt lacZ expression cassette
